
Resource Sheet # 5-2: Creating a Logic Model

Instructions: Make copies of this page, cut the items along the dotted lines, and make a set for each participant for the Opening Exercise. The items are not intended to be in chronological or logical order. Participants will be asked to do that during the opening exercise. It is important that participants physically manipulate the pieces of paper to simulate the process of creating a logic model. This is much more effective than simply asking the participants to number the items in a logical fashion.

Obtain county educational grant for community-based organizations

Increased effectiveness with callers

Decreased suicidal feelings and thoughts

Implement new hotline training program

Decreased suicide attempts

Increased support perceived by callers

Crisis center operators are unaware of the newly expanded and available mental health services

Identify expert in local mental health services to speak to hotline operators

Increased knowledge among hot line operators
